WHITEPAPER
FINA COIN

WHAT IS DEFI ?

DeFi stands for Decentralized Finance. It enables a global, open alternative to every financial service you use today — savings, loans, trading, insurance and more — accessible to anyone in the world with a smartphone and internet connection. The world's financial system needs upgrading. In an age of increasing globalization, money transfers still rely on outdated legacy systems. Payment solutions and financial services require numerous intermediaries and are often siloed. Most forms of currency are issued and controlled by centralized governments. More than one third of the world's population is still unbanked and as such cannot partake in the global economy. Every year, migrant workers around the world spend over \$38 Billion on transaction fees and currency conversion fees to send payments back to their families; total fees average around 7% of the payment amount. These high fees have a large impact on poverty and growth rates in developing countries.

BITCOIN VS TRADITIONAL FINANCE

Ten years ago Bitcoin emerged as an alternative global payment system. Its value proposition is fairly simple: instead of the traditional reliance on centralized banks and third-parties, Bitcoin provides a decentralized, open, and peer-to-peer payment system.

Since its creation in 2008, Bitcoin's evolution as an asset class has two distinct phases: 1) Discovery Phase - lasted until around 2014 with the emergence of more exchanges and custodians, which coincided with better security and liquidity 2) Structuring Phase – this current phase has ushered in a broad range of complementary technologies and services alongside Bitcoin's growing adoption

The Growth of Decentralized Finance (DeFi) We foresee an emerging third phase, the Institutional Phase, where Bitcoin is increasingly held as an asset by financial institutions such as banks, hedge funds, pension funds, sovereign wealth funds, endowment funds, and others. Why would they hold Bitcoin? It's a hedging instrument against the risks inherent in centralized fiat currencies, debt instruments, and equities.

ABOUT FINA COIN

Fina Coin is a new generation of cryptocurrency, which belongs to the utility token family, used and implemented on our platform, tokens are developed and maintained for various purposes of various industries which include token use, for staking, Mining, gaming, and delivery of goods and services. Fina Coin aims to enlighten society and its use towards massive adoption. Fina Coin is committed to enabling all consumers to perform, global consumption security, privacy, freedom and business convenience using Fina Coin which is currently tipped to become a major force to be reckoned with soon. Fina Coin will facilitate various transactions on various platforms, this utility token will serve as a payment solution on our platform. Also for rewards and community development, and various other services on our platform. Fina Coin is a blockchain-based project, designed to achieve, as well as to drive the digitization of various industries. With high expectations saturated and focused on achieving plans and targets. Thus enabling various gamers to purchase Bep-20 based tokens. With many advantages in the field, with high hopes for this project, it has many advantages for its users, ranging from E-sports market, gaming industry and various others that embrace and take full advantage of blockchain technology

MINING MACHINE

It is a complex mathematical problem solving process. Therefore, this process is often likened to a gold mining process. This mathematical problem solving process is a form of effort to add new blocks in the crypto transaction system called blockchain.

FINA COIN has a mining engine to support various aspects of future Crypto development programs. This will keep the price of Fina Coin stable because the management has the resilience of several crypto assets being mined.

CEX (DECENTRALIZED EXCHANGER)

Centralized exchanges (CEX) are the largest types of exchanges of the total cryptocurrency exchange, examples of centralized crypto exchanges for example are Indodax, Digitalexchange.id, Binance, Kraken, Bithumb, ect

In centralized exchanges, Fina Coin offers fiat-to-crypto trading. This means being able to deposit “real money” or fiat money into an exchange, which then buys cryptocurrency with that money.

DEX (DECENTRALIZED EXCHANGER)

The second type of crypto exchange is a decentralized exchange (DEX). Decentralized exchanges do not hold funds (commonly referred to as non-custodial) for their users. In contrast, transactions or trade agreements are made through smart contracts and atomic swaps, so assets never go through an escrow service, but run on a peer-to-peer basis. There are more than 20 decentralized crypto exchanges Like EtherDelta, Bibox, BitShares Asset Exchange, Waves DEX, Bancor Network, OpenLedger DEX, Stellar DEX, IDEX, Token Store, Bisq, ryptoDerivatives, AirSwap.io, FcoinExchange, BarterDEX, DEX.top, DDEX and Ethereum.

We are very enthusiastic and serious about doing everything in the hope that Fina Coin will really be able to become a competitor of the previous Cryptocurrency.
